-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Claim Objections

Claim 1 is objected to because of the following informalities: in claim 1, line 3, "bolt" should be --nut-- and in line 5, "therein should be --thereon--. Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Cull (US 796,900). Cull discloses nut assembly comprising a first nut (2) with internal threads (2a) and a blind bore with female threads (2aa) and; a second nut (3) having internal threads (3a) and a flange with male threads (3b) which engage the female threads. The number of threads per inch of the internal threads is the same corresponding to a threaded bolt (1). As seen in the figures and as described in claim 1, the male and female threads have a greater pitch, or in other words have lesser number of threads per inch, than the internal threads.

Claims 1, 2 and 4 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Dillon (US 257,854). Dillon discloses nut assembly comprising a first nut (B) with internal threads (not labeled) and a blind bore with female threads (at c) and; a

second nut (C) having internal threads (not labeled) and a flange with male threads (at c) which engage the female threads. The number of threads per inch of the internal threads is the same corresponding to a threaded bolt (A). As seen in the figures and as described in lines, the male and female threads are "finer", or in other words have greater number of threads per inch, than the internal threads.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
